DETAILED ACTION

Election/Restriction

1. Applicant's election without traverse of Group I claims 1-15 and a request for a rejoinder of non-elected claims in Paper No. 8 are acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-7 and 10-14 are rejected under 35 U.S.C. 102(a) as being anticipated by King et al. (US 6,246,615).

Regarding claims 1, 5, 11, 12, 13, 14, a multichip module for leads-on-chip mounting comprising: a lead frame; a common, contiguous part of a wafer slice (26) formed in the lead frame; a number of semiconductor chips (22) (the number of chip is 2 or 8) formed in the lead frame, wherein the semiconductor chips in lead frame disposed on common contiguous part of the wafer slice. See King et al.'s Fig.4 and Fig.8.

Regarding claims 2, 3, 4, as shown in King et al.'s Fig.4 and Fig.8, lead frame has a lateral contour, common contiguous part of wafer slice has a lateral contour adapted to

Art Unit: 2811

lateral contour of the lead frame and are at a substantially constant distance from one another all way around, wherein the lead frame and wafer slice has a shape of rectangular.

Regarding claims 6, 7, as shown in King et al.'s Fig.6 and Fig.8, each of the semiconductor chip has an upper side and bonding pads (45) disposed on upper side, lead frame has a number of leads (32) having free ends protruding laterally into lead frame, a fastening device (carrier tapes 27) which disposed between upper side of semiconductor chips and underside of free ends of leads (32) disposed for fastening free ends of leads protruding into lead frame, bonding connections (46) electrically connecting leads to corresponding ones of bonding pads.

Regarding claim 10, as shown in King et al.'s Fig.6, free ends of leads are mirror symmetric.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over King et al. in view of Tsubosaki et al. (US 5,583,375).

King et al. teaches all the limitation of claim 7 as shown above but does not explicitly teach that the carrier tape are formed from polyimide having both sides are coated with a thermoplastic adhesive.

Art Unit: 2811

It is conventional and also taught by Tsubosaki et al. (Fig.5) that a carrier tape for bonding between a lead and a semiconductor chip is commonly formed from polyimide having both sides are coated with a thermoplastic adhesive.

It would have been obvious to one of ordinary skill in the art to incorporate the conventional carriertape structure as taught by Tsubosaki into King device in order to increase the adhesion between the lead and semiconductor chip.

Allowable Subject Matter

4. Claims 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
